## Environment, environmentalists, and global change: a skeptic's evaluation

+ Publication Information

+ Related Subjects

Listen

**Abstract:**

Environmental studies are necessarily interdisciplinary but the history of the environmental movement reveals a lack of true understanding of how the topic should be approached. Interdisciplinary does not mean having a representative from every field of science and humanities. This approach does not reveal anything except the biases of each particular field and the interest in self-preservation as an environmental science. The [global warming](#) debate is discussed as an example of how political pressures have created a false environmental science.
